

Hillary Clinton Launches "Muslim Civilization" Science Exhibition

California Science Center

May 25, 2011 2:32pm EDT

-- U.S. Secretary of State, Hillary Clinton, launched an award-winning exhibition about scientific achievements from the Golden Age of Muslim Civilization, with a special video message at the California Science Center in Los Angeles. The **1001 Inventions** exhibition, which has attracted more than 1 million visitors over the past year during an international tour, opened for a VIP launch day on May 25th attended by LA County Sheriff Lee Baca and Ambassadors from LA-based foreign consulates.

In her pre-recorded message, Secretary Clinton praised the work of the **1001 Inventions** initiative for "celebrating a millennium of science and innovation in the Muslim world," and described the launch of the exhibition as "an exciting day."

Mrs. Clinton remarked that "the Muslim world has a proud history of innovators" and highlighted the achievements of pioneers like Fatima Al-Fihri, who founded the world's first modern university, and master engineer Al-Jazari, who created the crank mechanisms that drive every plane, train and automobile on the planet.

Prof. Salim Al-Hassani, Chairman of 1001 Inventions, commented, "We're honored that Secretary Clinton agreed to launch our exhibition here at one of the most prestigious science museums in the world. California Science Center has an international reputation for excellence in providing engaging and entertaining science experiences for young and old alike.

"The goal of **1001 Inventions** is to highlight the astounding contribution that Muslim civilization has made in the fields of science, technology, engineering and mathematics and how those advances still affect our lives today. More than a million people have already visited the 1001 Inventions exhibition during the first year of its global tour and that is the greatest endorsement we could ever hope for."

The **1001 Inventions** exhibition is currently on a five-year global tour, sponsored by ALJ Community Initiatives. Following blockbuster runs in London, Istanbul and New York, it will open to the public at the California Science Center, in Los Angeles, on May 27, 2011 for a seven-month run. The exhibition explores the scientific contributions made by men and women during the Golden Age of Muslim Civilization. Through interactive displays, guests will explore basic science principles that are often taken for granted, in such fields as optics, time-keeping, hydraulics, navigation, architecture and mathematics.

1001 Inventions highlights the contributions of scholars from a diverse region stretching from Spain through China during the 7th to 17th centuries. Visitors will discover how scholars from this region, of various faiths and cultures, preserved, nurtured, and advanced the world's knowledge in science and technology.

The **1001 Inventions** exhibition was recently crowned "Best Touring Exhibition" of the year at the annual Museums and Heritage Excellence Awards in London – considered by many to be the "Oscars" of the Museum world – fighting off stiff competition from some of the world's biggest names in exhibitions.
