Abdul Latif Jameel Foundation today announced its sponsorship of landmark Muslim heritage exhibition to be hosted at the Science Museum, London. *1001 Inventions: Discover the Muslim Heritage in Our World*, traces the forgotten story of a thousand years of science from the Muslim world, from the 7th century onwards. The free exhibition, which runs from the 21 January to 25 April 2010, will look at the social, scientific and technical achievements that are credited to the Muslim world, whilst celebrating the shared scientific heritage of other cultures.

This exhibition at the Science Museum marks the beginning of a global tour, partnering with the world's best science and education institutions. It will feature a diverse range of exhibits, interactive displays and dramatisation, all of which acknowledge the Muslim world's contribution to many modern inventions, spanning fields such as engineering, medicine and design, and can trace their roots back to Muslim civilisation.

Professor Chris Rapley, Director of the Science Museum, commented: "The thousand year period from the 7th century onwards was a time of exceptional scientific and technological advancement in the Islamic World, spanning China, India, Persia, Africa and Arabia. This is the period in history that gave us huge advances in engineering, mathematics, chemistry and physics. With over 15,000 objects in our collection spanning many different cultures, the Science Museum provides the perfect platform for this exhibition, as a place which encourages innovation and learning amongst visitors of all ages."

One of the iconic focal features of this exhibition is a six-metre high replica of the 'Elephant Clock'- a visually striking early 13th century water clock, the body of which contains symbols referring different cultures and is featured alongside a short feature film starring Oscar-winning actor Sir Ben Kingsley as Al-Jazari, inventor of the fabled clock.

Professor Salim T S Al-Hassani, Chairman of 1001 Inventions, explained: "The Elephant Clock is an early 13th century machine which gives physical form to the concept of multi-culturalism. This engineering marvel featured an Indian Elephant, Chinese Dragons, a Greek water mechanism, an Egyptian Phoenix, and wooden automata in traditional Arabian attire. It embodies cultural and scientific convergence of civilisations and is an appropriate centre-piece for an exhibition about the roots of science and technology."

Other striking exhibits featured in this interactive exhibition include:

Model of an energy efficient and environmentally-friendly Baghdad courtyard house.

A large 3 metre reproduction Al-Idrisi's 12th-century world map.

Model of Zheng He's Chinese junk ship – originally a 15th century wooden super structure over 100 metres long.

Medical instruments from a thousand year ago, many of which are still used today.

Model of a 9th-century dark room, later called Camera Obscura, which Ibn al-Haytham used to change our understanding of vision and optics.

Visitors can also learn about parallel stories of invention from other cultures and civilisations, illustrated through a display of rare and beautiful objects from the Science Museum's collections, many of which have never been on public display before. These include devices used for weighing and measuring, surgical instruments, astronomical devices, intricately crafted ceramic pots and textiles.

The exhibition will run from 21st January until 25th April 2010 (with a short closure between 25th February and 12th March 2010 inclusive). Further information about the
